

Grades Exercise

Create Grades Page

- We want to write a simple HTML form that gathers the necessary information to display a student's grade to them.
- Set up the form
- Add a field for the student's name.
- Add a field for student ID.
- For now just have your form submit to <http://mumstudents.org/params.php>

Starter Code

```
<!DOCTYPE html>
<html>
  <head>
    <title>Retrieve Grade</title>
  </head>
  <body>
    <h1>Retrieve your grade</h1>
    <p>Name: ...</p>
    <p>Student ID: ...</p>
    Get Grade!
  </body>
</html>
```

Add Features

- A dropdown to choose which assignment they want to see the grade for
- For extra security we will also add:
- A radio button for the student's entry
- A checkbox to confirm that they are not lying and really are only looking up their own grade
- Make page more user friendly with labels
